Providing NHS services

NHS vision screening and eye care in school – Response required.

Please go to **seeability.org/opt-in** to consent or tell us if your child is receiving eye care elsewhere.

28x more likely

Children with a learning disability are 28 times more likely to have serious sight problems, and need an eye test at least once a year.

At the test

- We check eye health and vision and whether glasses are needed.
- If glasses are needed we will give them for free, they are strong, flexible and comfortable and will be adjusted to suit your child.
- Your child doesn't need to read or talk – we use pictures and games.
- You can practise at home using the free Kay Say & Match app seeability.org/KaySayMatch
- Afterwards, you and the school will receive a plain English report explaining how best to support your child's vision.

If hospital care is needed, we will arrange this.
